finite and infinite energy storage and a Poisson distributed energy arrival process. The transmit power is optimized online as a function of the remaining battery energy to maximize the sum throughput. In [10], time and energy resources are jointly optimized on a slot by slot basis for a multi-user WPC system with finite and infinite energy ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

The capacity of battery energy storage systems in stationary applications is expected to expand from 11 GWh in 2017 to 167 GWh in 2030 [192]. The battery type is one of the most critical aspects that might have an influence on the efficiency and the cost of a grid-connected battery energy storage system.

There are various factors for selecting the appropriate energy storage devices such as energy density (W/h/kg), power density (W/kg), cycle efficiency (%), self-charge and discharge characteristics, and life cycles (Abumeteir and Vural, 2016). The operating range of various energy storage devices is shown in Fig. 8 (Zhang et al., 2020). It ...
