Flooded mines constitute groundwater reservoirs that can be exploited with geothermal heat pump systems. Modelling such a reservoir is challenging because groundwater flow and heat transport equations need to be solved within the complex geometry of mine workings. To address this challenge, we developed a tridimensional numerical model to ...

By repurposing disused mine shafts for energy storage, mine shafts can fill a productive function for up to 50 years beyond their original lifetime, and can mitigate decommissioning costs, while simultaneously creating new job opportunities and contributing to the green energy transition. ABB is a leader in developing world-class hoisting ...

COP21. Flooded mines represent major low temperature geothermal reservoirs, which also provide large-scale seasonal thermal storage capacities. ~ ese characteristics enable the development and dissemination of

Low-carbon energy transitions taking place worldwide are primarily driven by the integration of renewable energy sources such as wind and solar power. These variable renewable energy (VRE) sources require energy storage options to match energy demand reliably at different time scales. This article suggests using a gravitational-based energy storage method ...

Ett internationellt konsortium under ledning av det svenska energilagringstjänstföretaget Mine Storage har fått Vinnovafinansiering för att fördigställa projekteringen av vad som kan bli världens första kommersiella underjordiska pumpkraftanläggning i en gruva - ett bekräftande på det ökade intresset för potentialen i att använda övergivna gruvor för ...

The graph shows actual ground temperatures as measured in a borehole drilled for this purpose in Nicosia, Cyprus. As can be expected, the temperature is shown to be nearly constant below a depth of 5 m for the year round. ... Aquifer thermal energy storage uses natural water in a saturated and permeable underground layer called an aquifer as ...

Former mines are one example of obsolete energy infrastructure quickly becoming relics as renewable energy sources replace fossil fuels. Mines no longer used must be decommissioned, resulting in an expensive and time-consuming process that uses even more resources. Gravitricity, a gravity energy storage firm based in the United Kingdom, is ...

As part of the new French law on energy transition, the Demosthene research project is studying the possibility of reusing old abandoned mines to store thermal energy in the Picardy region. The aim is to store the heat required for a small collective unit, which corresponds to a volume of water of 2000-8000 m<sup>3</sup>, depending on the temperature (from 15 to 70 °C). An ...
