

How will Norway's power subsidy work?

The subsidy presented by the centre-left government will compensate 25% of power rates above a threshold of 0.70 Norwegian crowns per kilowatt hour and will be capped at 3.5 million crowns per company. In addition, companies can borrow up to 50 million crowns, he said.

Is stationary energy storage a good idea in Norway?

Electric cars now account for 79 per cent of new cars sold in Norway, and the MS Medstrøm was recently launched as the world's first electric fast ferry. In a global report on lithium-ion batteries, Norway ranked first in sustainability. These are impressive records. Even so, stationary energy storage is beginning to steal the limelight.

Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. "There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It's the key to turning intermittent wind and solar into a stable energy source," explains Pål Runde, Head of Battery Norway.

Is Norway a pillar of energy security?

Since the IEA's last policy review in 2017, Norway has remained a global pillar of energy security with its ample reserves of oil and gas produced in an environmentally responsible manner. Norway is a significant and reliable international supplier, exporting close to 90% of its energy production.

Will Norway develop a sustainable value chain for batteries in 2022?

On 29 June 2022, the Ministry of Trade, Industry and Fisheries announced its strategy for development of a sustainable and profitable value chain for batteries in Norway.

What is Norway's battery strategy?

The battery strategy is formulated as ten measures that will position Norway in the development of the battery industry in the coming years.

In the household PV market, the announcement of the subsidy phase-out leads to a significant increase in total electricity consumption for the treatment groups ($v = 0.456$, $p < 0.001$). Additionally, there is a slight increase in electricity purchased from the grid following the subsidy phase-out announcement ($v = 0.225$, $p < 0.001$). During the ...
