Battery electricity storage is a key technology in the world's transition to a sustainable energy system. Battery systems can support a wide range of services needed for the transition, from providing frequency response, reserve capacity, black-start capability and other grid services, to storing power in electric vehicles, upgrading mini-grids and supporting "self-consumption" of ...

The Journal of Energy Storage focusses on all aspects of energy storage, in particular systems integration, electric grid integration, modelling and analysis, novel energy storage technologies, sizing and management strategies, business models for operation of storage systems and energy storage developments worldwide.

The built environment accounts for a large proportion of worldwide energy consumption, and consequently, CO₂ emissions. For instance, the building sector accounts for ~40% of the energy consumption and 36%-38% of CO₂ emissions in both Europe and America [1, 2]. Space heating and domestic hot water demands in the built environment contribute to ...
