Gamma rays, a form of nuclear and cosmic EM radiation, can have the highest frequencies and, hence, the highest photon energies in the EM spectrum. For example, a (gamma)-ray photon with ($f = 10^{21}$, Hz) has an energy ($E = hf = 6.63 \text{ times } 10^{-13}$, J = 4.14, MeV). This is sufficient energy to ionize thousands of atoms and molecules, since only 10 to 1000 eV are ...
