

Photos of planets in the solar system

What objects are in our Solar System?

Our solar system contains objects ranging in size from the sun, the largest item, to tiny grains of rock in the asteroid belt. Take a tour of our cosmic neighborhood in pictures. Come on, let's go!

What planets are in the Solar System?

Digital illustration of the Solar system. Sun, Earth and planetary Moon, Mars, Jupiter, Saturn, Uranus, Neptune and the dwarf Pluto. Eclipse light, Abstract lens flare ring background. This chart compares the first Earth-size planets found around a sun-like star to planets in our own solar system, Earth and Venus.

How many planets are in the Solar System?

Browse 2,208 planets of the solar system photos and images available, or start a new search to explore more photos and images. Digital illustration of the Solar system. Sun, Earth and planetary Moon, Mars, Jupiter, Saturn, Uranus, Neptune and the dwarf Pluto. Eclipse light, Abstract lens flare ring background.

Where can I find high-resolution images of the Solar System?

Explore NASA's media galleries to view and download high-resolution images of the solar system, agency missions, and more. Discover the cosmos! Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer.

Which planet has the best image ever taken of a dwarf planet?

Each and every planet--and one dwarf planet--in our solar system, represented with the single best image ever taken of it. Say hello to our neighbors. Can't get enough of this marble. NASA/NOAA/GSFC/Suomi NPP/VIIRS/Norman Kuring Mercury, as seen by MESSENGER. NASA/Johns Hopkins University Applied Physics Laboratory/Carnegie Institution of Washington

What are the four closest planets to the Sun?

Terrestrial planets include the four closest planets to the Sun located between the Sun and the asteroid belt; Mercury, Venus, Earth, and Mars. Astronomers who use the geophysical definition of a planet would also include the Moon as a terrestrial planet. Terrestrial planets are planets with a solid surface, often made up of rock or metals.

Introduction. The planetary system we call home is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as Pluto; dozens of moons; and millions of asteroids, comets, and meteoroids.

Mars, the red planet, is the seventh largest planet in our solar system. Mars is about half the width of Earth, and has an equatorial diameter of about 4,221 miles (6,792 kilometers). Mars is the fourth planet from the Sun, orbiting at an average distance of 141.6 million miles (227.9 million kilometers).

Our solar system is located in the Orion spiral arm of the Milky Way Galaxy and contains eight official planets that orbit counterclockwise around the Sun. The order of the eight official solar system planets from the Sun, starting closest ...

Located 30 times farther from the Sun than Earth, Neptune orbits in the remote, dark region of the outer solar system. At that extreme distance, the Sun is so small and faint that high noon on Neptune is similar to a dim twilight on Earth. This planet is characterized as an ice giant due to the chemical make-up of its interior.

Explore NASA's media galleries to view and download high-resolution images of the solar system, agency missions, and more. Image of the Day. Image. Astronomy Picture of the Day ... NASA News Photos on Flickr. ... View images from our missions exploring the universe and our home planet. For a list of all missions, visit the missions A-Z page ...

The image is the largest and most detailed photo of a spiral galaxy ever taken with Hubble. ... Hubble's high-resolution images of the planets and moons in our Solar System can only be surpassed by pictures taken from spacecraft that actually visit them. Hubble even has one advantage over these probes: it can look at these objects ...

Transcript (English) - [Narrator] Our solar system is one of over 500 known solar systems in the entire Milky Way galaxy. The solar system came into being about 4.5 billion years ago when a cloud of interstellar gas and dust collapsed, resulting in a solar nebula, a swirling disc of material that collided to form the solar system.

5 days ago; The solar system's several billion comets are found mainly in two distinct reservoirs. The more-distant one, called the Oort cloud, is a spherical shell surrounding the solar system at a distance of approximately 50,000 astronomical units (AU)--more than 1,000 times the distance of Pluto's orbit. The other reservoir, the Kuiper belt, is a thick disk-shaped zone whose main ...

Browse 37,400+ planets in solar system stock photos and images available, or search for space to find more great stock photos and pictures. space; Sort by: Most popular. Solar system The sun and nine planets of our system orbiting. Clipping path included for the foreground objects.Opacity and bump textures for the earth and other planets map ...

Jupiter is the largest planet in our solar system. If Jupiter was a hollow shell, 1,000 Earths could fit inside. Jupiter also is the oldest planet, forming from the dust and gases left over from the Sun's formation 4.5 billion years ago. But it has the shortest day in the solar system, taking only 10.5 hours to spin around once on its axis.
