What is a tactical energy storage unit?

When paired with AMMPS, the tactical energy storage unit helps further reduce the need for fuel, further reduces costs and most importantly it significantly increases the safety of troops in combat; because fewer fuel transport runs are required and the operation of the generators are quieter.

Could a flow battery bring energy storage to military bases?

The U.S. Army recently began testing something called a "flow battery" at Fort Carson, Colorado. If successful, the flow battery, which is powered by two chemical components dissolved in liquids that are pumped through the battery system, could someday help bring long-duration, large-capacity energy storage to many U.S. military bases.

Where can I find a report on long-duration energy storage?

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov/publications. Marqusee, Jeffrey, Dan Olis, Xiangkun Li, and Tucker Oddleifson. 2023. Long-Duration Energy Storage: Resiliency for Military Installations. Golden, CO: National Renewable Energy Laboratory.

Why is stationary energy storage important?

Stationary energy storage provides many value streams. It can be deployed in front of the meter in support of the grid or behind the meter to provide direct value for a customer. Both locations can contribute significantly to energy resiliency.

What is energy storage or duration?

Energy storage or duration is scalable and affordable. Because energy storage capacity or duration is solely dependent on the volume of carbon blocks, it can easily be increased without significant costs. This allows the BESS to have durations of multiple days at an affordable price. The BESS is inherently safe.

What is long-duration energy storage (LDEs)?

The Advanced Research Projects Agency-Energy (ARPA-E), through its Duration Addition to electricity Storage (DAYS) program (2), has invested in long-duration energy storage (LDES) systems with a focus on meeting the future needs of the grid. One such technology, developed by Antora Energy (3), stores thermal energy in carbon blocks.
