

# Planet in night sky

6 days ago#0183; Navigate the night sky. Download a sky map for the current month. Spot the Station. Choose your state, then city to see when the International Space Station can be seen crossing the sky. Bookmark this page as your one-stop planning resource for astronomy events. Note: By clicking any of these links, you will be leaving the NASA domain.

Many couples enjoy stargazing on date night, but they may not know what they're looking at. Star Walk 2 makes the experience of observing the night sky together much more informative. The astronomy app provides real-time data about the planets, stars, and other celestial bodies that couples see when they look to the stars.

Our Interactive Night Sky Map simulates the sky above Great Britain. The Moon and planets have been enlarged slightly for clarity. The Moon and planets have been enlarged slightly for clarity. On mobile devices, tap to steer the map by pointing your device at the sky.

2 days ago#0183; The ZHR value refers to the Zenithal Hourly Rate, i.e. the average number of meteors an individual observer could see in an hour, assuming perfectly dark sky conditions. This number is an estimate, the number an observer could see in real conditions depends on the actual intensity of the shower (which can be highly variable) and on the sky conditions.

6 days ago#0183; This month, catch planetary views of Saturn, Jupiter, and Mars, witness a close pass of the Parker Solar Probe by Venus, and get ready for an occultation of the bright star Spica by the Moon. This is the Night Sky Network Member Site. Club Members can login here.

Planets - Five planets in our solar system are easily observed without a telescope: Mercury, Venus, Mars, Jupiter and Saturn. Uranus is just barely visible for those with excellent eyesight under dark-sky conditions, provided you know where to look. The planets appear to move across the sky, against the background of the much more distant stars.

## Planet in night sky
