Which energy storage system can store the most energy?

As it can be seen, the BEST system that can store the most energy is the one that starts at 1000 bars (maximum depth of around 10,000 m) and stops at 300 bars (minimum depth of around 3000) for both air and hydrogen as compressed gases.

How much electricity can a storage system store?

As a comparison, if a storage recipient with a volume of 785,000 m<sup>3</sup> were filled with water and descended by gravity to 10,000 m and generating electricity with an efficiency of 90%, the system would store 19.3 GWh of electricity. This is similar to the storage capacity of the Ludington Pumped Storage Power Plant in the USA.
