

Sodium nitrate (NaNO_3 , $\geq 99.0\%$), potassium nitrate (KNO_3 , $\geq 99.0\%$), sorbitol fatty acid ester (Span80), ... Nanoencapsulation of binary nitrate molten salts for thermal energy storage: synthesis, thermal performance, and thermal reliability. Sol. Energy Mater. Sol.

Bearing in mind that molten nitrate salts also wet and spread over almost any surface they contact, whenever the salt at high temperature ($>500\text{ }^\circ\text{C}$) comes in contact with containment materials such as stainless steel, corrosion with the liberation of nitrogen oxides can be expected, for example, $\text{Cr} + 2\text{NO}_3^- = \text{CrO}_4^{2-} + 2\text{NO}$ and similarly for reactions with Ni ...

Potassium Nitrate with Silica and Alumina Nanoparticles for Thermal Energy Storage Manila Chieruzzi^{1*}, Adio Miliozzi², Tommaso Crescenzi², Luigi Torre¹ and Jos²³³; M Kenny¹ ... particles embedded in potassium nitrate as molten salt base material and the thermal characterization of the obtained nanofluid. Methods

Molten salts are a promising medium for thermal energy transfer and storage. They have a very low vapor pressure and most are unreactive in air. Over the past 3 decades, Sandia National Laboratories has investigated a variety of molten salt mixtures of alkali nitrates and, most recently, quaternary mixtures of sodium, calcium, lithium, and potassium nitrate ...

Molten salts are simply salts that turn into a liquid state at elevated temperatures. Commonly used salts include sodium nitrate, potassium nitrate, and calcium nitrate. These materials exhibit excellent thermal storage capabilities and have high boiling points and low vapor pressures, which make them ideal for use as heat transfer fluids.

Additionally limitations of molten salt storage may arise due to storage media costs, the risk of corrosion and the difficulty in hygroscopic salt handling. For sensible heat storage in solar power plants, a non-eutectic molten salt mixture consisting of 60 wt % sodium nitrate (NaNO_3) and 40 wt % potassium nitrate (KNO_3) is used. This

Experimental study of thermophysical properties and thermal stability of quaternary nitrate molten salts for thermal energy storage. Author links open overlay panel Lu-lu Zou a b, Xia Chen a b, Yu-ting Wu a b, Xin Wang c, Chong-fang Ma a b. Show more. Add to Mendeley. ... Solar salt (60 wt% sodium nitrate (NaNO_3) and 40 wt% potassium nitrate ...

Sodium and potassium nitrate typically forms a weak basic melt below $600\text{ }^\circ\text{C}$. Chromium is soluble in these salts but iron forms a passive oxide layer which limits the migration of chromium from the metal. ... Corrosion of stainless steel 316 in eutectic molten salts for thermal energy storage. Sol Energy, 172 (2018),

pp. 198-203. View in Scopus ...

Lithium nitrate has the highest heat of fusion with $\Delta H = 24.32 \pm 1.42$ kJ/mol. Sodium and potassium nitrate are somewhat lower with $\Delta H = 16.79 \pm 0.26$ and 9.20 ± 0.36 kJ/mol. The measured values found via DSC compare well with literature data (Table 1). Binary mixtures with calcium nitrate are plotted along the x-axis and show a

HITEC, a eutectic blend of sodium nitrate, sodium nitrite, and potassium nitrate, distinguishes itself as a superior choice due to its unique amalgamation of favorable thermal characteristics. ... This review consolidates knowledge about HITEC molten salt for thermal energy storage applications, providing valuable perspectives for researchers ...

110 MWe power tower near Tonopah, NV. 10 hours of thermal storage (1.1 GWh) using molten nitrate salt heated from ~ 300 – 600 Commissioned in 2015. ... (molten-salt storage) (MWh) U.S. Energy Information Administration (June 5, 2018) ... potassium nitrate) as Class I ...

Novel Molten Salts Thermal Energy Storage for Concentrating Solar Power Generation Funding Organization: DE-Solar Energy Technologies Program ... "Thermodynamic properties of potassium nitrate-magnesium nitrate compound $[2\text{KNO}_3 \cdot \text{Mg}(\text{NO}_3)_2]$," *Thermochimica Acta*, Vol. 531, pp. 6-11, 2012. Department of Metallurgical and Materials Engineering ...

Molten alkali nitrates are used commercially as thermal storage fluids (HTF) for solar thermal electricity generation. Their range of operation is limited by the thermal stability and this limits the energy (steam-Rankine cycle) efficiency of these processes. In this study, the effect of atmosphere on the thermal stability of nitrates was investigated using simultaneous thermal ...

Salts used for storage (such as sodium nitrate NaNO_3 and potassium nitrate KNO_3) have melting points between 300 – 500°C and volumetric heat capacities between 1670 ... There are two different configurations for the molten salt energy storage system: two-tank direct and thermocline. The two-tank direct system, using molten salt as both the ...

Whereas the weight loss of purified potassium nitrate molten salt (PNMS) increases which were shown in Figures 3 and 4. Figure 3 showed the weight loss of PNMS was 1.74% after 27 h at 350°C , 2.56% at 450°C and 4.29% at 550°C . These indicated PNMS was more stable below 450°C (when the weight loss was less than 3%, molten salts are defined as ...

A comprehensive review of different thermal energy storage materials for concentrated solar power has been conducted. Fifteen candidates were selected due to their nature, thermophysical properties, and economic impact. Three key energy performance indicators were defined in order to evaluate the performance of the different molten salts, ...

Potassium nitrate molten energy storage

Table 2 highlights the different combinations of the binary salt mixture with different molar ratios that were used for thermal energy storage applications. The main drawback with these kinds of binary salt mixtures was higher melting point, and recently, ternary molten salt mixture (NaNO_3 , KNO_3 , LiNO_3) and quaternary (NaNO_3 , KNO_3 , LiNO_3 , $\text{Ca}(\text{NO}_3)_2$) ...

In this study calcium nitrate, sodium nitrate, and potassium nitrate were mixed to form cheap ternary molten salts based on different weight ratios. These molten salts can be used as both sensible heat storage materials and latent heat storage materials.

The nitrate based binary mixture molten salt (60 wt% NaNO_3 -40 wt% KNO_3) known as solar salt, is widely used as thermal energy storage medium in the CSP plant for its better economic profit (Bauer et al., 2013) and usually thought to be stable even at the temperature higher than 500 °C.
