Do energy storage systems provide value to the energy system?

In general,energy storage systems can provide valueto the energy system by reducing its total system cost; and reducing risk for any investment and operation. This paper discusses total system cost reduction in an idealised model without considering risks.

What are the benefits of energy storage?

There are four major benefits to energy storage. First,it can be used to smooth the flow of power,which can increase or decrease in unpredictable ways. Second,storage can be integrated into electricity systems so that if a main source of power fails,it provides a backup service,improving reliability.
