

The grid-scale Italian energy storage market has been kickstarted from two different directions. The first was big wins for battery storage projects in ancillary service and capacity market auctions by Terna, in 2020 and 2022, respectively. The second is a policy recognition from Terna that energy storage will be

The beneficiaries will be selected through a bidding process, where storage developers will compete based on offers relating to the lowest amount of aid requested per offered capacity volume. The scheme will be open to all technologies meeting the performance requirements set by the Italian TSO and approved by the Italian Energy Regulator.

The scheme totalling EUR17.7 billion (US\$19.5 billion) will provide annual payments covering investment and operating costs for those developing, building and operating large-scale energy storage in Italy. It will be allotted via a competitive bidding process where developers with the lowest offer win out.

The first phase of the scheme is specifically targeting lithium-ion battery energy storage system (BESS) projects while a second auction will be carried out for pumped hydro energy storage (PHES) projects, Terna's two "reference" technologies chosen for their technological and commercial maturity.

In an effort to achieve the renewable energy targets for Samoa, EPC seeks to implement two additional Solar & BESS Renewable Energy Generation Facilities (REGF"s). To this end, EPC is now soliciting EOI"s from suitably qualified Independent Power Producers

Explore a case study, spotlighting an energy storage project ideal from the auction perspective--optimal hours of operation (4 to 8 hours) and strategically priced for success; Delve into the possibility of future capacity auctions opening up to other technologies

The European Commission has approved, under EU State aid rules a EUR17.7 billion Italian scheme to support the construction and operation of a centralised electricity storage system. The measure contributes to the achievement of the objectives of the European Green Deal and "Fit for 55" package, by enabling the integration of renewable energy ...

The European Commission (EC) has greenlit a EUR-17.7-billion (USD 19.4bn) Italian scheme to aid the construction of more than 9 GW/71 GWh of electricity storage facilities, it announced on Thursday. The scheme will run till the end of 2033 and will provide annual payments to electricity storage developers to cover their investment and operating ...
