

Second largest moon in our solar system

Is Titan the second largest moon in the Solar System?

NASA's Cassini spacecraft snapped the image on Sept. 11, 2011 and it was released on Dec. 22. (Image credit: NASA/JPL-Caltech/Space Science Institute) Titan is Saturn's largest moon and the second largest in the solar system (after Ganymede of Jupiter). It is the only moon in the solar system with clouds and a dense, planet-like atmosphere.

What is the largest moon of Saturn?

Titan is the largest moon of Saturn and the second largest moon in the solar system. Titan is the only moon wrapped in a thick atmosphere.

What is the largest moon in the Solar System?

Orbiting the planet Jupiter is the solar system's largest moon. Called Ganymede, it has a diameter of 3,275 miles (5,270 kilometers). This makes Ganymede even larger than the planet Mercury, which has a diameter of 3,032 miles (4,879 kilometers). If Ganymede formed in orbit around the Sun rather than Jupiter, it would likely be defined as a planet.

Which Moon has a thick atmosphere?

Saturn's largest moon, Titan, has an earthlike cycle of liquids flowing across its surface. It is the only moon with a thick atmosphere. Did You Know? Saturn's largest moon Titan is an extraordinary and exceptional world. Among our solar system's hundreds of known moons, Titan is the only one with a substantial atmosphere.

Why is Titan considered the largest moon in the Solar System?

Because the atmosphere is so high, Titan was thought to be the largest moon in the solar system for a long time. It wasn't until 1980 that Voyager was close enough to discover it was actually smaller than Ganymede. Titan's atmosphere is active and complex, and it is mainly composed of nitrogen (95 percent) and methane (5 percent).

What is the furthest Moon from Jupiter?

The furthest from Jupiter was called Callisto. Callisto is the second-largest moon of Jupiter and the third-largest in the solar system overall, having a diameter of 2,995 miles (4,820 kilometers). The surface of Callisto is heavily cratered, and it is likely the least active world in the solar system.

Saturn is the sixth planet from the Sun and the second-largest planet in our solar system. Like fellow gas giant Jupiter, Saturn is a massive ball made mostly of hydrogen and helium. ... each of Saturn's moons tells another piece of the story surrounding the Saturn system. Saturn has 83 moons. Sixty-three moons are confirmed and named, and ...

Saturn's second-largest moon, discovered in 1672 by the Italian-born French astronomer Gian Domenico

Second largest moon in our solar system

Cassini, this moon is named for a Titan of Greek mythology. ... The largest moon in our solar system PLUTO: Charon is its largest moon OBERON: Second-largest moon of Uranus SATURN: Titan is its largest moon

moons, yet embedded in Saturn's rings are distinct moons or "moonlets." "Shepherd" moons help keep the rings in line. Saturn's moon Titan, the second largest in the solar system, is the only moon with a thick atmosphere. In the realm beyond Saturn, Uranus has 27 known moons. The inner moons appear to be about half water ice and ...

Parts-per-million chart of the relative mass distribution of the Solar System, each cubelet denoting 2 × 10²⁴ kg. This article includes a list of the most massive known objects of the Solar System and partial lists of smaller objects by observed mean radius. These lists can be sorted according to an object's radius and mass and, for the most massive objects, volume, density, and surface ...

Titan is the only moon in our solar system that has many similarities to Earth -- a dense atmosphere, lakes, river channels, and even volcanoes. Titan is the largest of Saturn's many moons and the second largest in our solar system after Ganymede. It is bigger than Mercury, 50% wider than Earth's moon, and of a similar size to Mars. That ...

moons, yet embedded in Saturn's rings are distinct moons or "moonlets." Small "shepherd" moons help keep the rings in line. Saturn's moon Titan, the second largest in the solar system, is the only moon with a thick atmosphere. Beyond Saturn, Uranus has 27 known moons. The inner moons appear to be about half water ice and half rock.

Second Largest Moon October 4, 2004 Full-Res: PIA06490 The icy moon Rhea, Saturn's second largest satellite, hangs before Cassini in this narrow angle camera image, showing just a hint of its crater-pocked surface. Rhea is 1,528 kilometers (950 miles) across. The image was taken in visible light on Aug. 25, 2004, at a distance of 8.8 million kilometers (5.5 ...

Callisto (Jupiter IV) is the fourth and last Galilean moon, and is the second-largest of the four, and at 4820.6 kilometers in diameter, ... NASA's Stunning Discoveries on Jupiter's Largest Moons | Our Solar System's Moons; A Beginner's Guide to Jupiter's Moons; Dominic Ford: The Moons of Jupiter. With a chart of the current position of the ...

The moon Titan. Titan is the largest moon of Saturn. It is the second largest moon in our solar system. Titan is larger than the planet Mercury, though it is not as dense. It is about half the size of Earth. Titan's surface averages -178°C, a temperature where water is always ice and methane is liquid. Titan orbits Saturn about every 16 days.

Some of the most unique, interesting moons orbit these two gas giants, and that includes the largest moon in the solar system. The biggest moon in the solar system is Jupiter's moon Ganymede with a diameter of 3,273-miles (5,268-kilometres), making it larger than the planet Mercury and the ninth largest object in the

Second largest moon in our solar system

solar system.

How Many Moons Are in Our Solar System? Naturally-formed bodies that orbit planets are called moons, or planetary satellites. The best-known planetary satellite is, of course, Earth's Moon. Since it was named before we learned about other planetary satellites, it is called simply "Moon." According to the NASA/JPL Solar System Dynamics team, the current tally [...]

Most moons in our solar system are named for mythological characters from a wide variety of cultures. Newer moons discovered at Saturn, ... Titan, the second largest in the solar system, is the only moon with a thick atmosphere. In the realm of the ice giants, Uranus's inner moons appear to be about half water ice and half rock.

The second largest moon in our solar system is Saturn's moon, Titan. Titan has a diameter of 5,149 kilometers (3,200 miles), making it only slightly smaller than Ganymede. The atmosphere on Titan exudes a golden glow from dense gasses, and ice coats the surface.

Overall, it is the second-largest moon in our solar system, the biggest one being Jupiter's moon Ganymede. Another designation for this giant moon is Saturn VI. ... It is about 1.5 times bigger than the Earth's Moon, which is the fifth-largest moon in the solar system. The moon Titan is even bigger than the planet Mercury whose diameter is ...

Saturn has the second-shortest day in the solar system. One day on Saturn takes only 10.7 hours (the time it takes for Saturn to rotate or spin around once), and Saturn makes a complete orbit around the Sun (a year in Saturnian time) in about 29.4 Earth years (10,756 Earth days).

The Solar System [d] is the gravitationally bound system of the Sun and the objects that orbit it. [11] It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, forming the Sun and a protoplanetary disc. The Sun is a typical star that maintains a balanced equilibrium by the fusion of hydrogen into helium at its core, releasing this energy from its ...

Titan is the largest Moon of Saturn, and the second largest Moon in the whole Solar System, following Ganymede the largest Moon in the Planet Jupiter. In terms of size, Titan is 50% wider than Planet Earth's moon and larger than Planet Mercury. It has a diameter of around 5150 km, and is located at a distance of 1.2 million km from host Planet ...

Answers for second largest moon in our solar system crossword clue, 5 letters. Search for crossword clues found in the Daily Celebrity, NY Times, Daily Mirror, Telegraph and major publications. Find clues for second largest moon in our solar system or most any crossword answer or clues for crossword answers.

Titan is the Saturn's largest moon and is the second largest moon in our solar system. If it were not orbiting Saturn, Titan could be considered a planet as it is larger than Mercury. ... Titan's diameter is 50 percent larger

Second largest moon in our solar system

than Earth's Moon, making it among the largest natural satellites in the solar system. Titan's most obvious ...

Titan is the largest moon of Saturn and the second-largest in the Solar System is the only moon known to have an atmosphere denser than the Earth's and is the only known object in space--other than Earth--on which there is clear evidence that stable bodies of liquid exist. Titan is one of seven gravitationally rounded moons of Saturn and the second-most distant among ...
