In a cardiac emergency, a portable electronic device known as an automated external defibrillator (AED) can be a lifesaver. A defibrillator (Figure (PageIndex{2})) delivers a large charge in a short burst, or a shock, to a person's heart to correct abnormal heart rhythm (an arrhythmia). A heart attack can arise from the onset of fast, irregular beating of the heart--called cardiac or ...

However, capacitors traditionally struggle with long-term energy storage. Within capacitors, ferroelectric materials offer high maximum polarization, useful for ultra-fast charging and discharging, but they can limit the effectiveness of energy storage.
