What is a solar battery storage system with backup?

From rolling blackouts to lightning storms to simply spending more time at home, a solar battery storage system with backup gives you the power to decide how your stored solar electricity is used, so yours can be the house on the block where the lights shine bright and the electricity bills drop. Tesla Powerwall 3

Can solar power be stored in a battery?

Existing solar systems typically have solar inverters which change the DC power produced by panels to AC power that can be consumed in your home or exported onto the grid. But if you want to store that AC power in a battery, it needs to be inverted again to DC power.

What is battery storage & how does it work?

Battery storage lets you leverage low-cost energy that has already been generated and stored, ensuring your rates stay low and don't affect your monthly budget. In some cases, you can even sell the energy you're storing back to the grid when the rates are higher and bank the profit. Better monitoring.

How much does solar battery storage cost?

The cost of solar batteries. If you're having solar panels installed by us, you can add solar battery storage to your system for as little as \$3,468. To make it more affordable, we offer flexible payment options, allowing you to spread the cost over 120 months (We're a credit broker not a lender).

How do solar panel batteries work?

Solar panel batteries store the surplus energy produced during the day and release it for use when the sun is not shining. There are two main battery technologies currently used: lithium-ion and lead-acid. Both types are designed to handle the cyclic charging and discharging necessary for solar energy storage.
