

Sun solar inverter manual

What is a solar inverter?

The Sun Inverter combines a sinewave inverter and a PWM solar charger in one enclosure and is easy to install, with a minimum of wiring. The inverter allows you to power domestic equipment - requiring 230V AC - using 'leisure' or 'automotive' batteries rated at 12V or 24V.

How does a sun inverter work?

By default, the SUN Inverter uses its internal temperature for battery temperature compensated charging. An internal temperature reading is taken in the morning and then again when the SUN Inverter has been idle for at least one hour, for example when the charger is not actively charging a battery or supplying a load.

How to use a solar inverter?

:Set up a generator input. Set up an auxiliary (smart) load Set up Peak Power Shaving. Use an additional inverter or micro inverter. A nice feature of this page is that when the batteries are full and the inverter is still producing power from the solar PV or turbine, it is possible to direct the power generated to another

Can Sun inverter be used remotely?

Technical specifications 6.1. Technical specifications SUN Inverter Yes, can be used for remotely turning unit on/off, or for battery temperature sensing. Use Temperature sensor QUA PMP GX Device or a Smart Battery Sense.

What is a PV inverter manual?

The inverter is grid-connected, transformer-less, robust and of high conversion efficiency. This manual contains information about the inverter, which will provide guidelines on connecting the inverter into the PV power system and how to operate the inverter. The manual cannot include all information about the PV system.

What temperature compensation does a sun inverter use?

The graph displays the temperature compensation for a 12V system and uses a $-16\text{mV}/^{\circ}\text{C}$ temperature compensation coefficient. For a 24V system multiply the voltages by 2. By default, the SUN Inverter uses its internal temperature for battery temperature compensated charging.
