

Swedish flow battery energy storage station

Where is Sweden's largest battery energy storage solution located?

This is why we are now building Sweden's largest Battery Energy Storage Solution (BESS) of 10 MW, which will be located in Grums, in western Sweden. The main function of the system is to better balance the national grid networks.

Can flow batteries be used for large-scale electricity storage?

Associate Professor Fikile Brushett (left) and Kara Rodby PhD '22 have demonstrated a modeling framework that can help speed the development of flow batteries for large-scale, long-duration electricity storage on the future grid. Brushett photo: Lillie Paquette. Rodby photo: Mira Whiting Photography

How do flow batteries work?

Flow batteries: Design and operation A flow battery contains two substances that undergo electrochemical reactions in which electrons are transferred from one to the other. When the battery is being charged, the transfer of electrons forces the two substances into a state that's "less energetically favorable" as it stores extra energy.

Why do flow battery developers need a longer duration system?

Flow battery developers must balance meeting current market needs while trying to develop longer duration systems because most of their income will come from the shorter discharge durations. Currently, adding additional energy capacity just adds to the cost of the system.

How can a stationary energy storage system be scaled and managed?

Scaling and managing the energy storage system includes innovations for integrating and managing many stacks in a stationary energy storage system. This also includes innovations to mitigate challenges, such as electrolyte stability in open air, temperature control versus degradation, and high-capacity/cell number stacks.

Why do energy storage devices need to be able to store electricity?

And because there can be hours and even days with no wind, for example, some energy storage devices must be able to store a large amount of electricity for a long time.
