CTES technology generally refers to the storage of cold energy in a storage medium at a temperature below the nominal temperature of space or the operating temperature of an appliance [5]. As one type of thermal energy storage (TES) technology, CTES stores cold at a certain time and release them from the medium at an appropriate point for use [6]. ...

A low temperature is certainly insufficient to meet the energy demand to activate the reaction but too high a temperature would lead to decreased catalyst activity. The most appropriate reaction temperature was found to be around $180 \text{ }^{\circ}\text{C}$ with good kinetics, consistent with what was reported by Ye et al. [21]. The hydrogenation was done at a ...
