The interactive tool displays sunrise and sunset times, morning and evening twilight times, moonrise and moonset times, the Moon's phase, a list of naked-eye planets visible in the evening and morning skies, rise and set times for each of these planets, and more. How to Use the Astronomical Almanac to Find What Planets Are Visible Tonight

Planets Visible Tonight - November 2024. The month of November lets us see all of the planets except Mercury, which is too close to the sun for us to spy. Venus, Jupiter and Saturn are all evening planets, along with the ice worlds of Uranus and Neptune. Mars begins the month firmly as a morning planet but moves to allow decent late evening viewing as December comes into ...
