Power hungry: Why the energy transition may depend on storage and flexibility. Multiple authors. 2024-09-30. Archived info For every short survey taken, we give 2 to the Wellington Management UK Foundation to support educational charities helping economically disadvantaged children in EMEA.

While this paper explores the potential rising value of storage and flexibility to solve the intermittency of renewables, we remain positive on the future of renewable power development. Meeting the enormous challenge of the energy transition will require traditional fossil fuels, bridge fuels like natural gas, and renewables.

Demand for electricity is growing. The transition to a lower-carbon economy will likely require staggering amounts of electricity. As the world advances toward its decarbonization goals, demand for electric vehicles and appliances, heat pumps, and a wide range of electrified industrial, transportation, and agricultural processes should increase dramatically.

The Site. The proposed site is approximately 2km north-east of Wellington, adjacent to TransGrid's 330kV zone substation as depicted below. The BESS will occupy an area of ~10 hectares adjacent to the electricity grid and sharing a boundary with the TransGrid substation, this will reduce the need for high voltage power lines and visual impacts.
